Cibse Guide On Plumbing

Mixing systems. Mixing systems generally supply air such that the supply air mixes with the room air so that the mixed air is at the room design temperature and humidity. In cooling mode, the cool supply air, typically around 55 °F (13 °C) (saturated) at design conditions, exits an outlet at high velocity.

However, I just wanted to add a bit about the Association of Plumbing and Heating Contractors (APHC), the Chartered Institute of Building Service Engineers (CIBSE) and the Institute of Domestic Heating & Environmental Engineers (IDHEE), and more importantly what they all had to say about radiator covers and their affect on heat output and costs in general.

Radiator Covers - Good Or Bad? | BestHeating Advice Centre

Function. Oil heaters consist of metal columns with cavities inside which a heat transfer oil flows freely around the heater. A heating element at the base of the heater heats up the oil, which then flows around the cavities of the heater by convection. The oil has a relatively high specific heat capacity and high boiling point. The high specific heat capacity allows the oil to effectively
