On the left hand side d 1, d 6 tetrahedral and d 4, d 9 octahedral complexes are covered and on the right hand side d 4, d 9 tetrahedral and d 1, d 6 octahedral. For simplicity, the g subscripts required for the octahedral complexes are not shown. For complexes with F ground terms, three electronic transitions are expected and  $\Delta$  may not correspond directly to a transition energy.

Matter changes form but not identity in a physical change. A chemical reaction occurs and a new product is formed in a chemical change. If you are confused about chemical and physical changes and how to tell them apart, you've come to the right place.

In some cases, it may be hard to tell whether a chemical or physical change occurred. For example, when you dissolve sugar in water, a physical change occurs. The form of the sugar changes, but it remains the same chemically (sucrose molecules).
