Parsing, syntax analysis, or syntactic analysis is the process of analyzing a string of symbols, either in natural language, computer languages or data structures, conforming to the rules of a formal grammar. The term parsing comes from Latin pars (orationis), meaning part (of speech).. The term has slightly different meanings in different branches of linguistics and computer science.

Parsing - Wikipedia

Syntactic analyzer. Enter a phrase, or a text, and you will have a complete analysis of the syntactic relations established between the pairs of words that compose it: its kind of dependency relationship, which word is nuclear and which is dependent, its grammatical category and its position in the sentence.

language. A morpheme is not necessarily the same as a word. The main difference between a morpheme and a word is that a morpheme sometimes does not stand alone, but a word, by definition, always stands alone. The field of linguistic study dedicated to morphemes is called morphology.. In English, when a morpheme can stand alone, it is ...
