In general, an iptables command looks as follows: sudo iptables [option] CHAIN\_rule [-j target] Here is a list of some common iptables options: -A --append - Add a rule to a chain (at the end). -C --check - Look for a rule that matches the chain's requirements. -D --delete - Remove specified rules from a chain. -F --flush - Remove all rules.

### Iptables Tutorial: Ultimate Guide to Linux Firewall

I already wrote about Linux command line bittorrent client. However, I received few more queries regarding firewall issues. Basically you need to open ports using iptables. ADVERTISEMENTS Bittorrent client by default uses tcp 6881 to 6889 ports only. In order to work with Bittorrent client you need to open these ports on firewall. Remember, if ... iptables -A OUTPUT -m bpf --bytecode '4,48 0 0 9,21 0 1 6,6 0 0 1,6 0 0 0' -j ACCEPT Or instead, you can invoke the nfbpf\_compile utility. iptables -A OUTPUT -m bpf --bytecode "`nfbpf\_compile RAW 'ip proto 6'" -j ACCEPT Or use tcpdump -ddd. In that case, generate BPF targeting a device with the same data link type as the xtables match.

### **Man page of iptables-extensions - Netfilter**

iptables [-t table] -E old-chain-name new-chain-name Description. Iptables is used to set up, maintain, and inspect the tables of IP packet filter rules in the Linux kernel. Several different tables may be defined. Each table contains a number of built-in chains and may also contain user-defined chains.

### **iptables(8) - Linux man page**

Iptables is an IP filter, and if you don't fully understand this, you will get serious problems when designing your firewalls in the future. An IP filter operates mainly in layer 2, of the TCP/IP reference stack. Iptables however has the ability to also work in layer 3, which actually most IP filters of today have.
