To quote the above link: "When INADDR_ANY is specified in the bind call, the socket will be bound to all local interfaces." From another link: The value "INADDR_ANY" means that we will bind to any/all IP addresses that the local computer currently has.But yes - many implementations will bind to the first interface, (not "all"). But for one PC with one NIC, the difference is academic.

c - Understanding INADDR_ANY for socket programming ...

It Still Works

The first thing you might notice when you look at Table 220.12 is that "Dwelling Units" have been completely removed from the table. Since the general lighting load and the general receptacle load for dwellings have been included in the same number calculated at 3VA/#2, dwelling unit load calculations for these values was combined in a single section, 220.14(I).

The phrase was first found on tombstones some time before the fifth century. It became ubiquitous on the tombs of Christians in the 18th century, and for High Church Anglicans, Methodists, as well as Roman Catholics in particular, it was a prayerful request that their soul should find peace in the afterlife. When the phrase became conventional, the absence of a reference to the soul led people ...

The website is 100% broken. It displays bits of configuration and status about your active timers, but just always says "You timer is currently set to OFF", and I can't change the active timer. The Android app is quite hard to use, but is actually functional. The biggest difficulty for me is how awkward it is to manage multiple timers.
